## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-3, drawn to an apparatus for generating smoke, classified in class 239, subclass 136 or class 122, subclass 41.
- II. Claim 4-10, drawn to an apparatus for testing for leaks including a smoke chamber with a supply of fluid and a heating element, classified in class 73, subclass 40.7+.
- III. Claims 11-18, drawn to an apparatus for testing for leaks including a means generating smoke and a multi-position selector valve, classified in class 73, subclass 40.7+.

Inventions II, III and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all the limitations in group I are not in groups II and III. Specifically, group I includes a smoke chamber not included in group III and an orifice not included in group II. The subcombination has separate utility such as a smoke generator for fumigation or special effects.

Inventions III and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because all the limitations in II are not in III. The subcombination has separate utility such as a training device for simulating the smoke of a fire.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Groups II and III, and the search required for Group II is not required Group III restriction for examination purposes as indicated is proper.
